

# SOFTWARE Caisse

CATERING

The Caisse software is used to manage self-service canteens and company restaurants using the same identification product necessary for the multiservices SAXO system (see datasheet).

It works with various means of identification: contactless Mifare smartcard or read only card (125 Khz), key fob, token.

The Mifare technology card is compatible with all MICRO BE software including access control, electronic purse, etc.

The Caisse software works with Windows 98® or more recent and requires, as a minimum, a PC.

The Caisse software can work with computerized balances or with the electronic purse of the card. The touch screen and specific keyboard management is supported by the software. The program works as a network with several workstations all linked to one unique database which allows a centralized management as well as complex and specific queries.

The Caisse is a software for cash register and catering with Windows®.

# Technical specifications

- ✓ Number of articles: 999
- ✓ Number of product families : unlimited
- ✓ Number of means of payment: 4 (cash, cheque, bank card, voucher)
- ✓ Number of periods: 5+1 (sittings, day...)
- ✓ Number of groups: 999
- ✓ Number of accounts: unlimited
- ✓ Number of function buttons: 4 / service
- ✓ Automatic functions associated to the group
- ✓ Black day list management with possibility of special pricing
- ✓ Number of sale points : 16
- ✓ Limit of amounts possible
- ✓ Totals on articles, payment modes, VAT, tariffs and families.
- ✓ 99 key panels can be selected automatically by time period or manually.
- ✓ Article management by weight
- ✓ Sales and payments journal
- ✓ Manual selection in the case of a forgotten card
- ✓ Scripts which allow specific personalization

# Functions

- ✓ Ticket printing
- ✓ Computerised record keeping
- ✓ Transaction journal
- ✓ Reset by period
- ✓ Already passed and reset
- ✓ Level of cashiers' rights
- ✓ Keyboard control, personalized keyboard, mouse or touch screen
- ✓ Link to spreadsheet
- ✓ Database account management
- ✓ Configurable ticket
- ✓ User identification by RFID smartcard or token
- ✓ Debit on the user's medium or in the database
- ✓ Calculation of set meal prices
- ✓ Calculation of admission
- ✓ Calculation VAT and percentages
- ✓ Calculation of automatic discount
- ✓ Debit from salary/post payments
- ✓ Price by code
- ✓ Reimbursement of the last ticket
- ✓ Client display management
- ✓ Closing ticket sent by email

The software is used for simple prepayment needs but also for complex tariffication systems.

The software can manage two printers.

The ticket printer and the management printer.
