

SLATE CHECKING READER

The reader works with Mifare technology smartcards. The smartcard is compatible with all MICRO BE software such as catering, access control, electronic purse, photocopier, vending machine, etc.

The automatic input saves a lot of time for the staff, avoiding manual checking with its possible mistakes.

The slate is a daily checking system allowing pupils to enroll for school or extracurricular services (catering, study-time, after school activities, etc.) using a contactless multiservice smartcard.

The keyfob can replace the smartcard

Example of configuration

The electronic slate memorizes the daily checking of pupils enrolling for a school or extracurricular service (catering, study-time, after school activities, etc.). At a pre-defined time, it then transmits this check-list to a central service via an Internet server.
